WESTERN BOND

Wyoming Natural

Superior Quality

WESTERN BOND

Bentonite is named after a deposit of water swelling clay discovered near Fort Benton, Montana. Bentonite formed from the weathering of volcanic ash in seawater and it's composition is dominated by the presence of montmorillonite.

Our partner Bentonite Performance Minerals LLC and Tsuchiyoshi Industry, have an Exclusive Sales arrangement in Asia. We supply "WESTERN BOND" the highest quality Sodium Bentonite made in Wyoming, USA.

Brand Background

We started purchasing Wyoming Bentonite in 1970. After successfully handling Bentonite in the Asian market, we registered "WESTERN BOND" as our company trademark in 1988. Today, WESTERN BOND has a dependable and trustworthy reputation in the Asian market.

Montmorillonite

The composition of Wyoming Bentonite is montmorillonite. It has outstanding characteristics such as water absorption, heat resistance waterproofing, used for applications such as Foundry, Pet Industry, Geosynthetic lining.

Technical Support

We have a full in-house Research Center staffed with PhD level Engineers and Technicians.
Our Technical Department have accumulated vast knowledge and practical experience.
We support our clients' needs to provide them a competitive edge.
